Join This Free Webinar

More medications to manage. More possible drug interactions. More potential interventions that could go undetected.

Hospital pharmacists today are faced with a growing responsibility to play an even more active role in overall patient care while trying to manage more patients and an overwhelming amount of clinical data to guide their decisions.

On April 26, join our free web seminar titled *"Medication Management Made Easier with Real-Time Surveillance and Clinical Intelligence Dashboards."*

During this webinar you will learn how your hospital pharmacists can more efficiently improve outcomes, reduce costs and manage risk by:

- Using real-time surveillance to prevent ADEs by automatically identifying high-risk patients before their condition deteriorates
- Viewing a patient's comprehensive clinical data in a single screen, eliminating the need to access multiple systems
- Easily accessing integrated drug and disease reference content with a single click
- Quickly documenting all intervention activity directly within the pharmacist's workflow

All attendees of this webinar will receive a copy of our latest white paper *"Intelligent Evidence: Defining the Practice of Medicine"*.

We hope you can join us for this educational seminar. If you are unable to attend but would like to learn more about the content discussed, email us at clinicalxpert@thomsonreuters.com.
